

Alexander Karachevtsev

Web Developer

I develop applications using React.js. I write the backend myself and also integrate external APIs. I create styles using CSS and SASS, but I often use Bootstrap and MUI. I have experience in maintaining and supporting databases on MS SQL Server, and for my projects, I use MongoDB. I don't use SQL frequently, but I can write queries (I built reports with queries in 1C that were over 200 lines long). Another area of expertise is .NET WinForms: I develop both applications and controls. I've been teaching programming to school students for 6 years.

Location

Yerevan, Armenia

Education

2021, Master's degree
Information Systems and Technologies
NCFU, Stavropol, Russia

2019, Bachelor's degree
Applied Mathematics and Informatics
NCFU, Stavropol, Russia

Expertise

- Languages:
 - JavaScript
 - TypeScript
 - C#
 - Python
- Web:
 - React
 - Redux
 - MUI
 - Bootstrap
 - Next
- DB:
 - MongoDB
 - MS SQL Server
- Desktop:
 - .NET
 - DevExpress
- Mobile:
 - React Native
- Other:
 - Git
 - GitHub
 - Jest
 - Insomnia
 - LINQ

Languages

Russian: native

Spanish: A2

English: B2

Italian: A2

Experience

Dec 2023 - Present

Martspec

React Web Engineer

Support and develop website, implement Atomic Design

Dec 2022 - Present

Freelance

Web Developer

Projects:

- Development of a landing for the customer
- Layout of a forum for the customer
- Mobile app for viewing photos from Martian rovers (React Native, NASA APIs)
- Website with recipes for dishes (React + Bootstrap + TheMealDB)
- Solutions to HackerRank and LeetCode problems (JS and TS)
- Solutions to ProjectEuler problems (C#)

Aug 2022 - Dec 2022

Developer Express

.NET Support Developer

Customer Support in English:

- Provided recommendations to customers on using the company's products to solve specific tasks.
- Wrote bug reports and address issues.
- Demonstrated the product's functionality to users using personal demo projects.

Jul 2021 - Jul 2022

Strizhament

Developer

I supported and customized 1C:Retail 2.3 for the "Vinoteka Strizhament" store chain. During this time, I:

- Configured synchronization with the "Vinoteka Strizhament" mobile application via REST API.
- Set up synchronization between 1C: Retail and the Bitrix website (rewriting 40% of the integration module).
- Reduced the number of support requests from employees in 70 stores by 50% by resolving configuration errors in the 1C: Retail system.
- Configured MS SQL Server and implemented database backup procedures.
- Managed the transition of the store chain to 1C: Retail during a merger.

Additional Info

I am looking for a job in a company with interesting projects, whether it's their own product or outsourcing. I am also open to project-based work. If you don't find a technology in my resume that you require, I am willing to learn it quickly.
